PROFILE

Backend engineer with 5+ years of experience building Python/Django systems end to end: REST APIs, real-time WebSockets, Celery workers, PostgreSQL and Redis, shipped with Docker and Nginx. I test the parts that usually break (concurrency, state transitions, auth) and ship software people use: an internal HR system, a live event photo wall, and production WooCommerce plugins for client stores. Currently on a remote contract with an Austria-based team, and writing an M.Sc. thesis on low-latency publish/subscribe synchronization.

EXPERIENCE

Software Engineer · Adlas Digital Solutions · Contract, remote — Aug 2025 – Present

- Develop and maintain backend services with Django, Celery, Redis and PostgreSQL in Dockerized environments.
- Extended a Saleor-based e-commerce backend to meet custom client requirements.
- Automated infrastructure provisioning with Terraform on VMware vSphere.
- Connected REST APIs to React and Vue.js frontends.

Backend Engineer · Rooberoo Mansion · Part-time — 2020 – Present

- Designed and built Seataar, a real-time seat reservation and ticketing backend (Django Channels, Redis, PostgreSQL, WebSockets). Seat maps sync live, so concurrent buyers see current availability.

Software Developer (R&D) · Metafan — Aug 2023 – Jan 2025

- Built Mahsa, the company's internal HR system (Django 5.2, sole developer): RFID-reader attendance API, lunch reservations, OTP login, web push, surveys and Excel reports. Used in-house; now open source with 64 tests and CI.
- Built proof-of-concepts and internal tools for R&D projects, including the Pandemic Detector Platform.

Freelance Developer · MiM Script — 2021 – Present

- Built 8 WordPress/WooCommerce client sites from scratch (Iran, Austria, Canada) and still maintain all of them.
- Custom plugins in production: **MiM Dollar Toolkit** (live USD-to-Toman pricing from exchange rates, pre-invoice checkout, SMS, mobile OTP login; 159 tests, CI on PHP 7.4–8.3) and **MiMify** (order notifications to Telegram through a Cloudflare Worker relay; running on 2 stores).
- Run self-managed Linux VPS hosting: Nginx, PHP-FPM, MariaDB, Redis, Cloudflare.

Earlier: QC Technician, Stockland (2020–2021) · Moodle and BigBlueButton administrator for online classes during COVID-19 (2020).

SELECTED OPEN-SOURCE PROJECTS

Leads github.com/Mohammad78SD/leads
Django lead-SLA module: lifecycle as a state machine, row locking with SELECT … FOR UPDATE, soft delete at model and queryset level, OpenAPI docs. 130 tests, including concurrency races against real PostgreSQL.

Event Photos github.com/Mohammad78SD/event-photos
Guests upload by QR code, with per-guest moderation, a live projector wall and a Celery-built ZIP export. Redis rate limits, nginx X-Accel-Redirect media. Built in about 5 days and used live at an event. 90 tests.

RahoRasm API github.com/Mohammad78SD/rahorasm-backend
DRF backend for a tour booking platform: tours, hotel pricing, reservations, OTP-by-SMS login with JWT. 57 tests.

SKILLS

Backend	Python, Django, DRF, Django Channels, FastAPI, Celery, WebSockets, JWT, GraphQL, Saleor
Data	PostgreSQL, Redis, MariaDB, SQLite
Infra	Docker, Nginx, Linux, Terraform, VMware vSphere, GitHub Actions, Cloudflare Workers
Testing	pytest, PHPUnit, CI
Other	JavaScript, Vue.js / Nuxt.js, React · PHP, WordPress, WooCommerce plugins

EDUCATION

M.Sc. Computer Engineering (Software) · 2023 – 2027 (expected)
Islamic Azad University, Tehran Central Branch
Thesis: Optimizing real-time data synchronization and reducing latency in distributed systems through an enhanced publish-subscribe architecture.

B.Sc. Computer Engineering (Software) · 2018 – 2022
University of Science and Culture

CERTIFICATES & LANGUAGES

- CS50, Harvard / edX
- English Advanced Certificate, ILI
- Regional rank, Kharazmi Youth Festival
- English (advanced), Persian (native)
